

MOBILE DEVICE SECURITY TIPS

General Security

- Keep your mobile devices with you at all times or store them in a secured location when not in use.
- Set PINS and passwords on your mobile. The password used should be as strong a password as your device will support.
- Do not circumvent security features or otherwise “jailbreak” your mobile device.
- Wipe or securely delete data from your mobile device before you dispose of it.
- Lost, stolen, or misplaced mobile devices should be immediately reported to the police.
- Deactivate mobile devices from HCC Outlook account when they are no longer being used or have been lost or stolen. (Instructions available in OwlNet.)

Application and Data Security

- Update your apps and operating.
- Install apps from trusted locations.
- When installing software, review the application permissions. Modern applications may share more information about you than you are comfortable with, including allowing for real time tracking of your location.
- Be careful when storing your personal data on your mobile device. If you lose the device, you could lose your data.
- Be wary of open Wi-Fi networks
- Back-up your data
